

## QUICK EXERCISE – HTML Links

Please write your HTML code using Sublime text editor and submit your file through Google Classroom. Renamed your file as followed : name\_studentID

You may use several HTML files for your answer.

- 1) Display five different images.
- 2) Display an image that has a border of size 2, a width of 200, and a height of 200.
- 3) Display an image that when clicked will link to a search engine of your choice (should be opened in a new window)
- 4) Create some links to various search engines (google, yahoo, altavista, lycos, etc).
- 5) Create links to five different pages on five different websites that should all open in a new window.
- 6) Add a "tooltip" to the link. The "tooltip" should say "Home". You can use any link of your choice
- 7) Generate a button using button optimizer page, and use the image as a button that route to [https://www.w3schools.com/html/html\\_exercises.asp](https://www.w3schools.com/html/html_exercises.asp) (should be open in a new window)
- 8) Create one new HTML page. Set style for link, hover, active and visited states of hyperlink based on your preferences. Please make sure that you **Remove underlines for visited and unvisited links, and specify "underline" for the hover and active link states**. You can use any link of your own. (Hint: using Internal CSS which need to be inserted in <head> section.)

### Note:

In addition, links can be styled differently depending on what **state** they are in.

The four links states are:

- **a:link** - a normal, unvisited link
  - **a:visited** - a link the user has visited
  - **a:hover** - a link when the user mouses over it
  - **a:active** - a link the moment it is clicked
- 9) Create one new HTML page. Then, create link-button for the following urls using CSS. (Hint: using Internal CSS)
    - URL: <https://www.w3schools.com/css/default.asp> (text: CSS Tutorial)
    - URL: <https://www.w3schools.com/html/default.asp> (text: HTML Tutorial)
